COMP0020: Functional Programming

<https://eduassistpro.github.io/>

University College London

Add WeChat Academic Year 2019 edu\_assist\_pro

## Course Objective

# Assignment Project Exam Help

- Explores the functional programming language
  - Uses the functional programming language
- <https://eduassistpro.github.io/>

NB : this module **does not aim to teach Haskell** (it is Haskell in passing).

**Add WeChat edu\_assist\_pro**

## Student Objectives

- 1 Understand the basics of the lambda calculus and combinators and how they are used in the implementation of functional languages.

- 2 Understand the m

- 3 Understand type c  
implemented in Miranda.

- 4 Write, understand and analyse non-trivial functional programs i

- 5 Understand the computation and memory management issues a  
implementation of lazy functional languages.

- 6 Solve problems relating to all of the above, under examination conditions.

## Approximate Schedule of Lectures

# Assignment Project Exam Help

Tuesdays : 10am Bentham House LG26 Lecture Room

Wednesdays : 10am Benth

Fridays : 1pm Cruciform Building B4

<https://eduassistpro.github.io/>

Start of Term : Monday 13th January 2020

5 weeks of lectures : Lambda Calculus, Miranda Programming, Advanced C  
(Reading Week)

4-5 weeks of lectures : Advanced Concepts, Implementation Technique

Add WeChat edu\_assist\_pro

# Assignment Project Exam Help

Moodle page : **CO**  
essential reading!

COMPGC16) —

<https://eduassistpro.github.io/>

There is no marked coursework, but students must complete formative e  
lectures. The book and the Moodle page have simple self-study exercises a  
past paper questions, without answers. Feedback is given on attempted s  
questions.

**Introduction to**

<https://eduassistpro.github.io/>

Add WeChat edu\_assist\_pro

Many people think of Alan Turing as ‘the father of computing’, but there are many other important figures in computer science. In particular, Alonzo Church (Turing’s PhD supervisor).

Church and Turing prom

- Turing was interested in how to express problems in a precise way, to b  
set of rules.
- Church was interested in how to express problems in a precise way, to b  
transformation using a small set of rules.

These approaches have much in common, but they lead to two radically different styles of programming.

# Assignment Project Exam Help

Consider the notion of programming languages in general :

- How many progra
- Does the choice of lan
- Are older program
  - ▶ should we only u
  - ▶ are the rest just “junk” ?

# Assignment Project Exam Help

- Can you just use (say) Java for every programming task?

- ▶ if a language (a Turing-equivalent)

at is

- ▶ Since many languages are Turing-equivalent

- What else do programmers need?
  - protection from common errors (e.g. type systems), different ways of expressing the same idea

- Different languages, different computational models,

<https://eduassistpro.github.io/>

Add WeChat edu\_assist\_pro

---

2. Turing-equivalence and Turing-completeness are outside the scope of this module.

- It can be helpful to group programming languages into different categories (though it can be difficult to do this precisely, since some languages incorporate more than one computational model).

# Assignment Project Exam Help

- There are many ways to do this; one way is to identify

- ▶ the “imperative” languages
  - ★ e.g. Java

- ▶ the “declarative” languages (typically based on the concept of solutions)
  - ★ e.g. Haskell, Miranda, Prolog

- The class of “declarative” languages contains both “functional” languages (e.g. based on Church’s  $\lambda$ -calculus) and “logic” languages (e.g. based on first-order predicate calculus)

## A simple example of the difference in programming style

- Assume “results” is the name of a variable that contains a sequence of 100 integers, and write code to select all those with a value less than 10
- Imperative style :

```
int    small[100];
int    j,k;
for    (j = 0, k = 0; j < 100; j++)
        if(results[j] < 10){ small[k] = results[j];
return (small);
```

- Functional style :

*filter (< 10) results*

- Concise, low syntactic “clutter”, reduced need to specify storage of intermediate results

An example of literate programming style using Miranda

## A practical example of functional programming style

# Assignment Project Exam Help

- Functional Prog

<https://eduassistpro.github.io/>

- ▶ But are they like Japanese Haiku poetry (elegant, but not very practi

Add WeChat edu\_assist\_pro

- ▶ Or are they like Karate (elegant, and useful in a fight)?

# Assignment Project Exam Help

- Prototyping a large object-oriented design using a functional programming language

- ▶ A commercial

- ▶ The world's largest

- ▶ A “mission-critical” financial system

- ▶ Over 100 programmers

- ▶ C++ required by client

<https://eduassistpro.github.io/>

Add WeChat edu\_assist\_pro

Component-based system design : a network of components ("nodes") communicating via streams of data ("arcs"). One or more inputs ("arcs"), one output ("arc").

# Assignment Project Exam Help

- Project requirements :

- ▶ Discrete-ev

<https://eduassistpro.github.io/>

- ▶ Prototyping of central optimisation and approximation algorithm

- ▶ The main constraint was C++

Add WeChat [edu\\_assist\\_pro](#)

- ★ Too slow for rapid prototyping work (execution speed was very fast, but development time and debugging effort too great for prototyping many different designs)

- IT Consultancy's dilemma :

- ▶ C++ required by client, but "not viable" for prototyping/simulation

- ★ Would t

- ▶ Rapid protot

- ★ Smalltalk known to client — raised issue of suitability of client's choice of C++ (consultancy did not wish to "insult" client)

- Alternative approach — use a functional language (Miranda)

- ▶ Higher Order, Statically Typed, Lazy, with Garbage Collection, no pointers, no assignment
- ▶ Unknown to client (!)

# Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu\_assist\_pro

- Selling points :

- ▶ Speed and Clarity with which algorithms can be

- ★ express

- ★ validate

- ▶ Can simulate key object-oriented designs in detail

- ★ With minimal detail for other components!

- Access to expertise :

- ▶ A “champion”

# Assignment Project Exam Help
